Technology for Adaptive Aging-National Research Council 2004-04-25 Emerging and currently available technologies offer great promise for helping older adults, even those without serious disabilities, to live healthy, comfortable, and productive lives. What technologies offer the most potential benefit? What challenges must be overcome, what problems must be solved, for this promise to be fulfilled? How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful, marketable products and services? Technology for Adaptive Aging is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication, education and learning, employment, health, living environments, and transportation for older adults. It includes all of the workshop papers and the report of the committee that organized the workshop. The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults.

When I'm 64-National Research Council 2006-02-13 By 2030 there will be about 70 million people in the United States who are older than 64. Approximately 26 percent of these will be racial and ethnic minorities. Overall, the older population will be more diverse and better educated than their earlier cohorts. The range of late-life outcomes is very dramatic with old age being a significantly different experience for financially secure and well-educated people than for poor and uneducated people. The early mission of behavioral science research focused on identifying problems of older adults, such as isolation, caregiving, and dementia. Today, the field of gerontology is more interdisciplinary. When I’m 64 examines how individual and social behavior play a role in understanding diverse outcomes in old age. It also explores the implications of an aging workforce on the economy. The book recommends that the National Institute on Aging focus its research support in social, personal, and professional development of older adults. It suggests that the workforce should be viewed as a resource rather than a burden. The book emphasizes the need for continued research in all areas of falls prevention and treatment in order to better understand the scope of the problem worldwide. In particular, more evidence of the cost-effectiveness of falls prevention strategies is needed to develop strategies that are most likely to be effective in specific setting and population sub-groups.

Successful Cognitive and Emotional Aging-Colin A. Depp 2009-08-28 The critical importance of brain health to the well-being of older adults is becoming increasingly clear. However, an important aspect that interests most people relates to what clinicians and their adult patients and family members can do to retain and even improve cognitive and emotional functioning as they age. Successful Cognitive and Emotional Aging thoroughly discusses the neuroscience of healthy aging and presents effective strategies for staying lively, engaged, and positive. The book is organized into three parts. The first one, focusing on behavioral and psychosocial aspects, strives to place cognitive aging in a broad context. With chapters that explore such topics as the meaning of wisdom, the role of spirituality in healthy aging, and what centenarians can teach us about cognition and emotion, this section sets the stage for a rich, robust, yet nuanced treatment of its subject. The second part addresses the biological aspects and presents the scientific foundation of cognitive aging, addressing such areas as public and professional education, interaction based on evidence drawn from a variety of traditional, complementary, and alternative sources. Although the understanding of the evidence-base is growing, there is much that is not yet understood. Thus, there is an urgent need for continued research in all areas of falls prevention and treatment in order to better understand the scope of the problem worldwide. In particular, more evidence of the cost-effectiveness of falls prevention strategies is needed to develop strategies that are most likely to be effective in specific setting and population sub-groups.

Touhy 2011-09 Geriatrics Health-Hülya Çakmur 2018-10-10 Aging is characterized by functional decline in every organ due to several cellular, biological, and physiological changes over time. Molecular and cellular damages are gradually decreasing in the physical and mental capacities of the human body. Health results have shown that lifespan has dramatically increased during the twenty-first century. Increasing elderly population naturally deals with many health problems leading to a rise in health expenditure and labor loss. The good news is that the clinical trials in gene therapy have almost stopped and/or reversed human aging. Regenerative medicine can repair and reverse aging in all body cells. Thus, the body's own repair mechanisms may struggle with aging and age-related diseases. Research is promising and suggests that human aging will be eradicated on earth.

Tuesdays with Morrie-Mitch Albom 2007-06-29 A special 20th anniversary edition of the beloved international bestseller that changed millions of lives. Maybe it was a grandparent, or a teacher, or a colleague. Someone older, patient and wise, who understood you when you were young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder. Wouldn’t you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He reconnected with Morrie in the last months of the older man’s life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned into one final “class” lessons in how to live. Tuesdays with Morrie is a magical chronicle of their time together, through which Mitch shares Morrie’s lasting gift with the world.
